

Below is a structured **Business Requirement Document (BRD) / Functional Requirement** that you can share with your website developer. It clearly explains the workflow and expected behavior.

Client Portal Enhancement Requirement

Objective

Enhance the Client Portal by adding three new modules in the left-side navigation:

1. **Quotation**
2. **Edit Request**
3. **Amendments**

These modules will enable a controlled invoice editing process with Admin approval and maintain compliance by allowing amendments whenever direct editing is not permitted.

1. Left Navigation Menu

Add the following menu items below the existing menus.

Dashboard

Profile

Billing

Quotation (New)

Edit Request (New)

Amendments (New)

Reports

2. Quotation Module

Purpose

Allow users to create quotations before generating actual tax invoices.

Features

- Create New Quotation
- Edit Quotation

- Delete Quotation (only if not converted)
- Print/PDF Quotation
- Email Quotation
- Search Quotation
- Duplicate Quotation

Numbering

Quotation should have its own numbering series.

Example:

QT-2026-0001

QT-2026-0002

QT-2026-0003

instead of invoice numbers.

Convert to Tax Invoice

Provide a button:

Convert to Tax Invoice

When clicked:

- Quotation becomes Tax Invoice
- Invoice number generated automatically
- All customer details, items, GST, taxes copied

3. Edit Request Module

Purpose

Once any document is generated, users should not be allowed to edit it directly.

Instead, they must submit an Edit Request.

Applicable for:

- Tax Invoice
- Credit Note
- Debit Note

Workflow

Step 1

User opens

Edit Request

Step 2

User selects

Document Type

Dropdown

Tax Invoice

Credit Note

Debit Note

Step 3

User enters

Invoice/Bill Number

Example

INV-1023

Step 4

System fetches the document automatically and displays:

- Bill Number
- Date
- Customer Name
- Amount
- GSTIN
- Status

Step 5

User enters

Reason for Edit

Example

Incorrect GST Rate

Wrong Quantity

Wrong Customer Name

Wrong HSN

Others

Provide Remarks textbox.

Step 6

Click

Submit Request

Request Status

After submission

Status should be

Pending

Admin Portal Workflow

Admin should have a new menu

Edit Requests

Admin can view

- Request Number
- Date

- Client Name
- Bill Number
- Document Type
- Reason
- Status

Admin actions

Approve

Reject

If Admin Approves

Status becomes

Approved

Now the respective bill becomes editable for that client.

Client Portal should display

Edit Allowed

against that request.

Client can edit

- Tax Invoice
- Debit Note
- Credit Note

Only after approval.

If Admin Rejects

Status becomes

Rejected

Editing should remain disabled.

Instead, user should use the

Amendments

module.

4. Amendments Module

Purpose

Whenever Admin rejects an edit request, the client should still be able to correct the transaction by creating an amendment document instead of modifying the original document.

Applicable for:

- Tax Invoice
 - Credit Note
 - Debit Note
-

Workflow

Open

Amendments

Search by

- Bill Number
- Customer
- Date

System displays the original document.

User clicks

Create Amendment

Amendment Screen

Original values should be displayed.

User can modify

- Customer Details
- Item Details

- Quantity
 - Rate
 - GST
 - HSN
 - Tax Amount
 - Remarks
-

Amendment Number

Separate numbering.

Example

AMD-0001

AMD-0002

AMD-0003

Original Invoice

INV-1056

Amendment

AMD-0005

Against Invoice INV-1056

Amendment History

Each invoice should have an amendment history.

Example

Invoice

INV-1056

History

Original Invoice

Amendment-1

Amendment-2

All amendments should remain traceable.

5. Status Flow

Invoice Created

Need Correction?

Submit Edit Request

Admin Review

Approve

Invoice Editable

OR

Reject

Create Amendment

6. Database Suggestions

Edit Request Table

Fields

- Request ID
- Client ID
- Document Type
- Bill Number
- Reason
- Remarks
- Request Date
- Status
- Approved By
- Approved Date
- Rejected By
- Rejected Date

Amendment Table

Fields

- Amendment ID
 - Original Bill Number
 - Amendment Number
 - Amendment Date
 - Document Type
 - Amendment Reason
 - Created By
 - Status
-

7. Permissions

Client

Can

- Create Quotation
- Create Edit Request
- View Request Status
- Edit Bill only after Admin Approval
- Create Amendment after Rejection
- View Amendment History

Cannot

- Edit Invoice directly after generation
 - Delete approved invoices
 - Modify rejected requests
-

Admin

Can

- View all Edit Requests
- Approve Request
- Reject Request

- Add Remarks while approving/rejecting
 - View Amendment History
 - Audit all changes
-

8. Notifications (Recommended)

Client Notification

When request submitted:

"Your edit request has been submitted successfully."

When approved:

"Your edit request has been approved. You may now edit Invoice INV-1023."

When rejected:

"Your edit request has been rejected. Please create an Amendment for Invoice INV-1023."

Admin Notification

Whenever a client submits an edit request:

"A new edit request is awaiting your approval."

9. Audit Trail (Recommended)

Maintain a complete audit log for compliance:

- Who created the invoice
 - Who requested the edit
 - When the request was submitted
 - Who approved/rejected it
 - When the invoice was edited
 - What fields were changed
 - Who created the amendment
 - Amendment history linked to the original document
-

Overall Workflow Summary

Quotation
